Department of Political Science  
Spring 2020

# Overview

- 1 Quick review
- 2 Introduction
- 3 Political Effects
- 4 Extra Material

# Review

## WHAT WE COVERED LAST MEETING?

- Puzzles: does terrorism increase around elections? how does it impact voting behavior?
- The link between elections and increase in terror attacks.
- Terrorism and voter preferences (Israel) – shift electorate to right.
- Evidence of valence theory: Turkey, Israel.
- Spain and retrospective voting.

Questions??

# Terrorism: Political effects

- The relationships between terrorism and political outcomes, for example elections.
- Puzzle 1: The **threat** of terrorism attacks and electoral behavior (voter preferences).
- Puzzle 2: Terrorism and voter turnout.
- Puzzle 3: Duration and survival of governments/leaders.

# Elections and Terrorism

- The effects of **direct harm** of terrorism on the voting preferences of public.
- Substantial differences between those that were directly attacked and those who did not.

## Getmansky and Zeitzoff (2014)

- Contributions:
  - 1 Terrorism and political preferences: the effects of **being threatened** by terrorism, not just directly casualty.
  - 2 Another method of terrorism: rocket launching, a more random method with respect to targeting.

# Elections and Terrorism

## Getmansky and Zeitzoff (2014)

- Why use rocket launching?
- Concerns of strategic targeting of specific population:
  - ① A function of missile technology (range).
  - ② Perpetrators are constrained to their location (Gaza strip).
- Terror group and **selection effects**: random casualties.

# Elections and Terrorism

## THE THREAT OF ROCKET LAUNCHING

- First use: 2001; Intensified in 2005: [▶ MissileTotal](#)
  - ① Israel disengagement from the Gaza strip.
  - ② Develop new and improved rockets.
  - ③ Total (2001-2019): over 12,000 rockets, 6500 mortars.
- Indirect costs: Psychological
  - ① 2012: PTSD in 43% of 7th and 8th graders.
  - ② Higher propensity of violence (children).
  - ③ Higher degrees of anxiety and depression (adults).
- Indirect costs: Economic
  - ① Fiscal pressures on local municipalities.
  - ② Closer of business and schools when threat increases.

# Elections and Terrorism

## THE THREAT OF ROCKET LAUNCHING

- Early warning system: activates a siren in all targeted localities. [▶ AlarmZones](#) (Alarm in Sderot)
- "Iron Dome" missile defense system:
  - Intercepts rockets in varying ranges.
  - Stationed in all areas at risk and can be moved contingent on threat. (The Iron Dome)
- 2012: first time rockets target Tel Aviv and Jerusalem.
- Casualties (2001-2019): 72 dead, 1971 injured.
- Using range emphasizes the effects of threat of being a target and not directly harmed by terrorism. [▶ RangeThreat](#)

# Elections and Terrorism

## Getmansky and Zeitzoff (2014)

- How proximity to the threat impact voting (support for right wing parties).
- The study: distance between localities and the Gaza strip (rockets range).
- Results: voters under threat (in the range of missiles), are more likely to support right wing parties (especially nationalist parties).
- The effect (0.2-0.6%) translates to 2-7 seats in the Israeli parliament.

# Elections and Terrorism

## Getmansky and Zeitzoff (2014)

- Incumbent:
  - ① Right-wing: no significant change.
  - ② Left-wing: increase support for right-wing parties.
- Right-wing incumbent not punished for failure to address the threat and its expansion.

## IMPLICATIONS

- ① Why conflicts endure? Terrorism → support for parties that are less likely to bargain and make concessions.
- ② The inefficacy of terrorism: failure to mobilize public to pressure government to grant concessions.

# Terrorism and Electoral Behavior

## Voter Turnout (Robbins et al. 2013)

- Public fear → terrorism is salient.
- Increased propensity to vote. Why?
- Emotions: fear and anxiety, interest in politics and invest in process (amplified by media).
- "Ensure" the "right" and most competent candidate is elected to address the national security threat.
- Negative emotions: scrutiny of the political environment and processes.

# Terrorism and Electoral Behavior

## **Voter Turnout (Robbins et al. 2013)**

- Using multiple terror databases (greater geographic and conceptual coverage).
- Voter turnout: the percentage of eligible voters who actually voted in legislative elections between 1975-2007.
- Terror incidents 1 year before elections.
- Results: increase turnout by about 0.2%.
- The effect is enhanced when terror attacks are more lethal.

# Terrorism and Democratic Government

## Duration and Survival of Governments

- How terrorism affects government survival?
- Rising security threats → punish incumbent government (retrospective voting).
- Survival and duration: do terror attacks and casualties "shorten" the duration of government staying in power?

# Terrorism and Democratic Government

## Duration and Survival of Governments (Williams et al. 2013)

- The likelihood of terrorism leading to premature termination of government control.
- Government survival → coalition dynamics.
- Underlying factor: coalition members, public pressure and alternative options.
- Left-wing government: more susceptible to failure since the alternative (right-wing government) is viewed as more competent.
- Right-wing government: survival is more likely since the alternative is not seen as competent enough to negate this security threat.

# Terrorism and Democratic Government

## Duration and Survival of Governments (Williams et al. 2013)

- Do not address losses in scheduled elections.
- Results: terrorism "shortens" the duration of governments in power.
- However, incumbent partisanship matter:
  - Right-wing → more likely to survive.
  - Left-wing → more likely to fail.

# Terrorism and Democratic Government

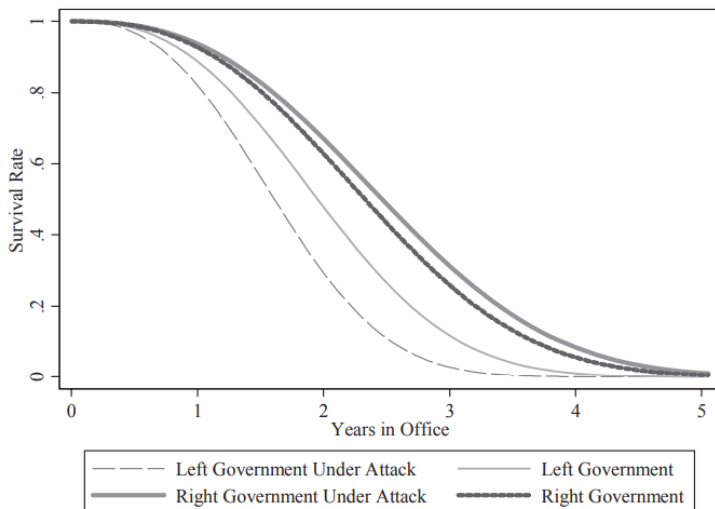

## TERRORISM AND SURVIVAL

# Terrorism and Democratic Government

## TERRORISM AND SURVIVAL

# Political Effects of Terrorism

- 1 Attacks → salient threat (public care more about why is this threat exists).
- 2 Main empirical findings: terrorism (and the threat of) increases turnout and shifts public support for parties that are perceived as security "experts".
- 3 Attacks close to elections: dynamic is amplified and affect outcomes (Israel 1996).
- 4 Governments may be willing to use force facing terror knowing the risk of losing office is very low.
- 5 Effect on political behavior → direct targets of terrorism.

# Recommended readings

More studies on the political effects of terrorism:

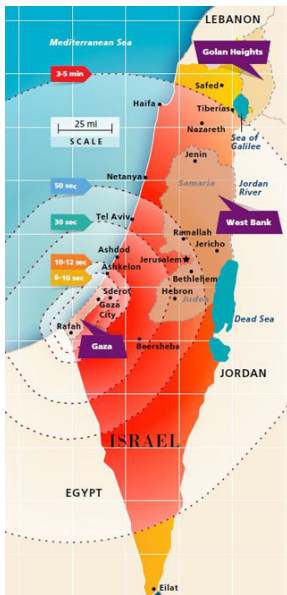

- ① Aksoy, Deniz, David B. Carter, and Joseph Wright. "Terrorism and the Fate of Dictators." *World Politics* Vol. 67, no. 3 (2015): 423-468.
- ② Park, Johann, and Valentina Bali. "International terrorism and the political survival of leaders." *Journal of Conflict Resolution* Vol. 61, no. 7 (2017): 1343-1370.

# Palestinian Terrorism

## TOTAL ROCKET LAUNCHES

# Palestinian Terrorism

The Gaza-based terrorist group Hamas has rockets that can reach most major cities in Israel.

## Hamas' Rockets

Range (in miles)

## Range of missiles launched from Gaza Strip

### By Rockets:

- ■ ■ ■ ■ "Qassam 2", "Qassam 3"
- ■ ■ ■ ■ "BM-21 Grad"
- ■ ■ ■ ■ "Upgraded Grad" (WS-1E)
- ■ ■ ■ ■ "Fajr-3"
- ■ ■ ■ ■ "Scijil-55"
- ■ ■ ■ ■ "Fajr-5", "M-75"
- ■ ■ ■ ■ "Upgraded M-75", "J-80"
- ■ ■ ■ ■ "R-160", "M-302 D"

### By Years:

- |                  |                   |
|------------------|-------------------|
| 10 km Max - 2004 | 45 km Max - 2011  |
| 20 km Max - 2006 | 75 km Max - 2012  |
| 40 km Max - 2008 | 160 km Max - 2014 |
